

Wireless Internet Policy
McMinnville Public Library
September 2015

Wireless access is now available at the McMinnville Public Library. The wireless service is provided by OnlineNW. If you have a wireless enabled laptop or electronic device, using the wireless service is as simple as turning on your computer and launching a web browser.

- Users must supply and configure their own equipment.
- Wireless is available in most areas of the library. Access will depend on the strength of your wireless card.
- Printing and software programs are not available via the wireless connection.
- Library staff cannot provide instruction or assist with setting up your equipment.
- As with most public wireless “hot spots,” the library’s wireless connection is not secure.
- The library’s “Adult Technology Use Guidelines” applies to the wireless connection as well.
